Language labs abound in number. Multi-media labs, computer-aided labs and digital media labs are just a few to mention. The underlying principle from the inception of the concept remains the same; it is a teacher-led/controlled lab environment. The administrator or teacher stays connected with the students Consoles and offer contents in the formats like rich media files, audio, video etc. While some utilize the full powers of software, others go for a combined approach; integrating software and hardware. Whatever is the environment, these types of arrangements are called “language labs.” They allow learners and teachers to play different types of media files and record their pronunciation. This enables self-assessment. Students can compare their pronunciation with that of their teacher and make changes accordingly.

Having a huge network of computers in a classroom is something everyone wants to avoid. If you are a teacher facing this dilemma, EduTab Language Lab is the perfect solution available in the market. Affordable, effective and rich with beneficial features, it brings out the power and ease of touch screen to be your perfect companion when learning a new language. This handheld device is sure to outsmart all its competitors. Following are the features which sets it apart from its competition.
Utilizing The power of tablets in teaching and learning

As you know, tablets are taking the industry by storm nowadays. They are portable, lightweight and start up faster than the most expensive laptops you can get. When combined with the power and ease of use of touch screen, it becomes the perfect companion of a language learner. All you need to do to open an application is just to slide your fingers across the screen. It also saves space. You don't have to buy the accessories like keyboard or mouse to operate the device. The interactivity makes it attractive for avid learners. EduTab Language Lab combines all these advantages with an array of powerful tools to make learning a new language fun and easy.

Personalized learning environment

EduTab Language Lab is the one you would want to have for a perfect one-to-one learning experience when trying to get acquainted with a new language. The solution functions like an educational operating system. It also facilitates WLAN. Quite naturally, learning becomes a true enjoyment. The wide array of options to communicate with your teacher allows you to choose the one ideal for you. The headphone attached to the system makes sure that even those who are shy to ask doubts are not forced to lag behind.

Revolutionary user experience

The product is the fruit of years of research in the involvement of users in the setup. As an administrator, you will find that setting up a language class is the matter of just a few minutes. The easy-to-use interface allows learners to customize the product as per their requirements. You don't need to acquire any special training to set up the solution. The autodidactic mechanism makes sure that an administrator can do anything within the network if the person knows how to use a mobile phone.

Stay connected

The product is designed in such a way that you can customize it so that you get automatically connected with your assigned teacher in the lab. All the devices stay inter-connected. This enables ease of content transfer, instant communication and a host of other interactive features.

Ease of communication

EduTab Language Lab offers numerous means of communication. Intercom calls, video chats and discussion boards are just a few to mention. Choose from the group or individual chat systems as per your requirements. It implies that your teacher is just a tap away on your screen to solve your queries.

Digital content

Unlike traditional software, EduTab Language Lab features an easy-to-use content management system. The facility to customize the content allows trainers to be as creative as they want. Insert videos, animations, text files or anything you want in the lessons offered to help your students. You can even use online streaming content for the purpose. The interactive stuffs available here would leave your students with no choice, but to get involved in every activity you assign.

Activities

It also features a great many in-built activities like surveys, polls and exams. They help teachers design the kind of assessment plans which they feel would help their students. Getting results in this scenario is the matter of a few seconds.

One-touch report

This may be the most helpful feature available in the product. Attendance reports, log reports; in fact the entire evaluation mechanism remains at your fingertips in this solution. This helps you to keep track of the performance of your students without having to go through a vast database.

Interactive

Inter-activity is something everyone expects from software-based digital language labs. And, this product offers it from start to finish. From the first screen to the content management system, inter-activity is an integral part of EduTab Language Lab. Above all, it is completely personalized. Use it to experience it!
Product overview

The essential components of EduTab Language Lab are tablets for the teacher and the learners featuring WLAN facility. You should have a server computer which should stay attached to the storage solutions being offered. All the devices will stay inter-connected in an Android platform. And, the tablets would have a headphone attached to it.

User Overview

Admin
Admin is the most important component of the system. He/she enjoys access to the entire network. Admin can modify any settings, assign permission and keep track of anything required. The person can access any part of the lab through a web interface or through the WLAN facility offered. Admin can even assign teachers, create different groups of students and arrange sessions for each in accordance with the requirements. Even all the reports available throughout the entire network remain easily accessible for the person.

Teacher/Trainer
This is another important component of the solution. The interface designed for the teacher differs slightly from that of the administrator. After the administrator has set up everything, the teacher gets automatically connected with the assigned number of students. The teacher can do anything required within the limit of the permissions assigned. Collaborating with students, preparing contents, evaluating assignments and creating different groups are just a few among the tasks a teacher can do here. The person can even create different groups among students, prepare notes, conduct exams and get results. The device also features a web-based interface and the teacher can create custom content for students.

Students
Students are the end-users in the network. Each one will have a tablet. It will be connected to the system either through the teacher or as an individual user. They can choose from the teacher-mode and the self-mode learning environments available. The interface designed for them is such that they can do anything with the content made available to them. They can record the content, work on them and listen to them to improve. Students will also receive assignments, notifications and other contents either from the teacher or from the administrator. They can also communicate with the teacher any time they want through different features available. Chats, voice calls, intercom calls, video chats and discussions are just a few to mention. The facility to conduct exams and get results within no time are the other two exciting features available in this product.
Advantages

- Utmost inter-activeness
- The availability of digital contents makes learning a true enjoyment.
- The sleek design eliminates the need of having to deal with a computer. You don't have to depend on either on the expensive and complicated networks or huge systems. Above all, you are able to save your precious space.
- Utmost flexibility for everyone involved; the admin, teacher and students
- The availability of learning materials in the format of one's choice; videos, animations and text files makes learning fast and interesting.
- Instant communication and interaction between students and teacher will improve productivity and take learning to a new level.
- The self-learning mode will improve performance and boost creativity.
- The publishing tool allows the teacher to create and publish his/her own content.
- The stylish design makes learning great fun.
- Instant answer for all your queries. You always stay connected with your teachers and fellow students in the class.
- The teacher can update content as curriculum progresses.

Technical functions

- EduTab Language Lab is designed for use in android platforms; from versions 4.0 and above.
- The product will have a user-management mechanism. It allows registered users to access contents made available to them by the teacher or the administrator.
- The administrator or teacher can assign class-wise or level-wise assignments as per the requirements.
- The administrator will have access to the entire network. The person can get into a particular user's profile and edit or disable it.
- The user-friendly screen in the user management allows editing, setting permissions and assigning students to a teacher. The permissions and other modifications a teacher or administrator makes will get saved on the system.
- The administrator will have full control of the solution.
- There will be three levels of users in the network; the administrator, teacher and students.

Go for EduTab Language Lab. You will never regret the choice!
